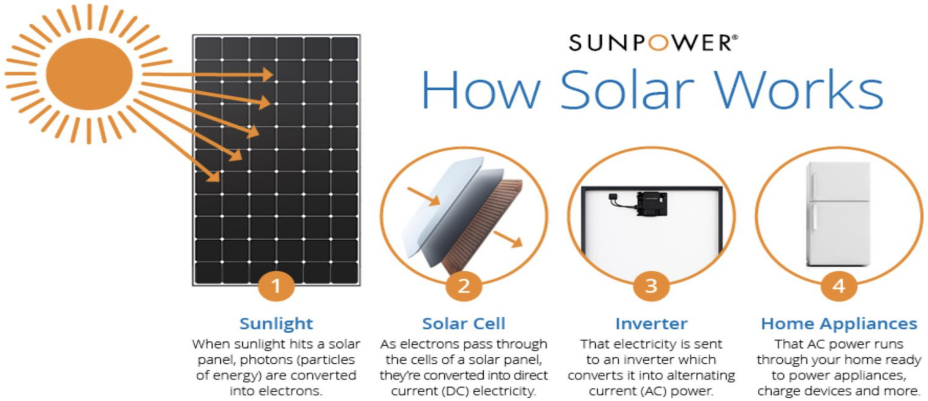
Solar Powered Technology

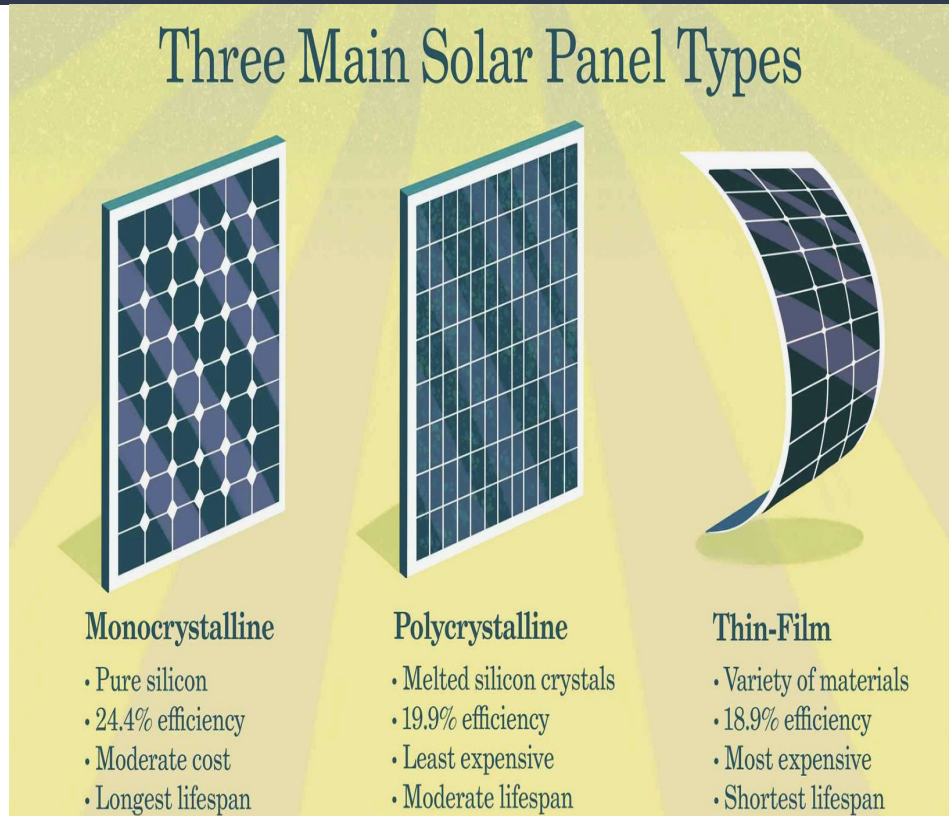
By: Graham Robinson

Electrical Engineering

What is Solar Powered Technology?

Solar Technology converts the sunlight into electrical energy for a cleaner and cheaper alternative by using photovoltaic panels also known as mirrors to concentrate solar radiation.





Why and where do you need Solar Powered Technology?

- Location
- Will Save You Money
- Would It Be Readily Available
- Future Demand

Benefits of this technology

- Reduces Electricity Bills
- Provides Tax Incentives
- Pairs with Solar Battery Storage
- Environmentally Friendly
- Cost per watt is around $2.60
- Better weather means better results
